SlimeLine Definition of Done

1. Code Completion:

- All code must be written to meet the requirements specified in the user story or task description.
- The code should be commented adequately for clarity and maintainability.

2. Code Review:

- Every task must undergo a peer code review process.
- Any feedback from the code review must be addressed and resolved.

3. Unit Testing:

- Appropriate unit tests have been created and are passing.
- Code coverage meets or exceeds the project's minimum threshold.

4. Integration Testing:

- New functionality is integrated with the existing codebase without errors.
- Integration tests have been performed and passed.

6. Performance:

- The new changes do not degrade the performance of the website. Performance metrics should be within acceptable limits.

7. User Experience:

- The task has been checked for UI/UX consistency. It should match the design specifications or style guide of the project.

8. Documentation:

- Any changes to the system are documented, including configuration changes, new environment variables, etc.
- Update the project's README or wiki if the task introduces changes that other developers or users need to know.
