JavaScript (JSX) Style Guide:

1. File Structure

- Organize components into logical folders based on functionality.
- Separate components and utilities into their own folders.

2. Component Naming:

- Use descriptive names for components.
- Follow PascalCase convention for component names.

3. Component Structure:

- Prefer functional components over class components.
- Utilize hooks for state and side effects.
- Keep components small and focused.

4. JSX Formatting:

- Use JSX syntax for defining UI.
- Write clean code with proper indentation.
- Avoid complex expressions.

5. Comments:

- Comment new components so other developers can understand them by reading
- Comments should describe

CSS Style Guide:

1. File Structure:

- Organize CSS files in the same folder with components or features.
- General css style files are in a separate folder

2. Naming and Spacing :

- Use descriptive class names
- Keep the names closely relate to the component they are for
- Clean Readable Code with

General:

- Code Reviews
- Separate Front-End and Back-End By folder structure
- Clean Code
